

Personal Profile

Experienced SRE & DevOps Engineer with a track record of designing resilient cloud infrastructure and improving developer experience through automation. Specializes in Kubernetes, observability, and optimizing CI/CD pipelines to reduce downtime and enhance scalability. Passionate about reducing toil through automation and monitoring solutions.

Core Skills

- Azure
- AWS
- Kubernetes
- Docker
- Linux
- Datadog
- Prometheus
- Powershell
- Collaboration

Career Summary

Sept 2023 – present Senior Site Reliability Engineer - Corpay

May 2021 – Sept 2023 Site Reliability Engineer - Corpay

- **Kubernetes Improvements:** Added KEDA based scaling, and optimized helm charts and deployment pipelines, improving efficiency and security, and led the migration to Workload Identity.
- **Datadog Expansion:** Built custom monitoring solutions, added new dashboards and monitors for better visibility and alerting, and developed a Python-based SSL monitoring tool, reducing observability gaps.
- **Automation and Ops:** Automated workflows to reduce toil, debugged critical production incidents, and improved system resilience.
- **Mentorship and Collaboration:** Actively mentor junior SREs, providing guidance on best practices, troubleshooting, and automation.

Mar 2020 – May 2021 DevOps Engineer - Flexential Professional Services

- Optimizing, managing, automating, and maintaining security/compliance adherence across multiple client AWS and Azure environments.
- Trained and mentored colleagues and acted as a point of escalation for incidents, outages, and project work.
- Collaborated Senior Engineers to onboard new clients and transition them to our reference architecture.
- The lead technical engineer for five unique customer environments.
- Designed and maintained highly available AWS infrastructure leveraging Kubernetes (EKS), EC2, EBS, etc.
- Proactively identified and responded to AWS security incidents utilizing IAM, CloudWatch, CloudTrail, and Security Groups.
- Improved security posture by managing SSL certificate life cycle using CertBot, Letsencrypt, Akamai, AWS Certificate Manager (ACM), etc.
- Refactored Terraform code to follow best practices for scalability and resiliency.
- Patching various Linux hosts, Windows servers, and Kubernetes clusters.

May 2016 – Jan 2017 Web Developer - Modea

- Orchestrated a top to bottom redesign of website front-end to address recurring UI issues, integrate design enhancements, and facilitate additional feature requests.
- Engaged clients and stakeholders to define and prioritize project goals, milestones, and delivery estimates.
- Conducted UX research activities to define a modern site layout and interfaces following HTML/CSS best practices.
- Integrated traffic load testing processes and tooling to measure and address site performance and availability.
